PROFESSIONAL SUMMARY

AI Full Stack Engineer with 4+ years of experience delivering production software, with a deep specialism over the last two years in Generative AI, Large Language Models (LLMs), and Agentic AI systems. Experienced building AI agents across low-code platforms (n8n, Power Automate) and full-code frameworks (LangChain, LangGraph), integrating with channels including WhatsApp Business, Telegram, Gmail, and Instagram. Currently at Mitie (UK) designing RAG pipelines, MLOps-enabled automation workflows, and Multi-agent Systems in active daily production use. Holds an MSc in Data Science from Nottingham Trent University. Proficient across the full stack Python, Node.js, React, FastAPI and experienced with Azure, AWS, and GCP. Committed to AI Governance and responsible deployment practices.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL, C#

Frameworks & Libraries: React.js, Node.js, FastAPI, LangChain, LangGraph, LlamaIndex, Semantic Kernel, Angular, .NET

AI & Machine Learning: LLMs, Generative AI, Agentic AI, Multi-agent Systems, RAG, Prompt Engineering, LLM Evaluation, Fine-tuning, NLP, Embeddings, Vector Databases, Semantic Search, Computer Vision, Azure OpenAI, Google Gemini Pro Vision, Hugging Face, PyTorch

MLOps & DevOps: MLOps, CI/CD, Docker, Kubernetes, Azure DevOps, Git, Terraform, Observability, Model Monitoring, AI Governance

Cloud & Platforms: Microsoft Azure (Function Apps, Logic Apps, AI Search, Cognitive Search, Cosmos DB, Azure OpenAI, Azure AI Foundry, Azure ML), AWS, GCP

Databases: MongoDB, SQL Server, Azure Cosmos DB, Vector Databases, PostgreSQL, Redis, Airtable

Automation & Integration: n8n, Power Automate, Power Apps, Microsoft Copilot Studio, Workflow Automation, Data Pipelines, WhatsApp Business API, Telegram API, Instagram API, template.io

APIs & Architecture: RESTful APIs, Microsoft Graph API, SharePoint Integration, A2A Protocol, MCP, GraphQL, Microservices, Custom Connectors

WORK EXPERIENCE

AI Application Developer | **Mitie Plc** | London, UK *Aug 2025 – Present*

- Built ESME, an AI service request agent using Azure OpenAI, LangChain, Node.js and React with Prompt Engineering and RAG handling inbound requests and staff FAQs autonomously, replacing a manual support team of 50+ people and significantly reducing ticket resolution time.
- Designed an exception handling agent mesh using Azure Logic Apps and Function Apps, with multiple AI agents communicating over the A2A protocol to detect and resolve workflow failures without human escalation — a production Multi-agent System in daily active use.
- Rebuilt the retrieval layer of DORIS (a workplace helpdesk email agent) by implementing a RAG pipeline integrating SharePoint, Azure Cognitive Search, and Azure blob storage with optimised Embeddings and Vector Databases, materially improving LLM Evaluation scores and response accuracy.
- Shipped a finance helpdesk automation agent that classifies incoming emails, retrieves policy documents via Azure AI Search, and drafts responses cutting the team's manual email-handling load by ~30% through end-to-end Workflow Automation and Prompt Engineering.
- Developed Node.js backend APIs and React frontend components across multiple AI products with full CI/CD pipelines, applying AI Governance principles to ensure auditability and appropriate human-in-the-loop escalation paths.

AI Automation Engineer | **Manzeera Technologies** | Bracknell, UK *Aug 2024 – Jul 2025*

- Designed and deployed AI agents using n8n (low-code Workflow Automation) integrated with WhatsApp Business, Instagram, Telegram, and Gmail APIs enabling multi-channel conversational AI at scale for multiple client verticals.

- Built a quote-generation AI agent that reads client requirements, references a live pricing sheet, and drafts structured quotes using [template.io](#) automating a previously manual sales process and reducing quote turnaround time significantly.
- Developed a real estate AI agent that captures tenant information and property details into [Airtable](#), then uses LLM-based reasoning to match and suggest suitable properties to prospective tenants based on their stated requirements.
- Built a website helpdesk AI agent for the company's own platform, capable of walking visitors through services offered, answering FAQs, and routing complex queries improving lead engagement and reducing inbound support volume.
- Created an investment advisory AI agent for a financial services client that captures a user's income and investment goals, then generates a tailored investment plan using [Agentic AI](#) and [Prompt Engineering](#) pipelines.

Software Developer | [Capgemini Technology Services](#) | Navi Mumbai, India *Jun 2021 – Sep 2023*

- Designed and maintained secure C#/.NET backend APIs on Azure, serving 16,000+ concurrent users across multiple client applications — full Software Engineering lifecycle from technical specifications through to UAT.
- Built and optimised React and AngularJS frontends; reduced page load time by ~5% through component refactoring, lazy loading, and API Design improvements.
- Maintained low post-release defect rates by contributing across the full SDLC alongside QA and business analysts; conducted code reviews identifying security vulnerabilities and performance issues before production.
- Worked with Docker and CI/CD pipelines to support deployment and release automation, aligning with DevOps best practices.

EDUCATION

MSc Data Science *Oct 2023 – Aug 2024*

Nottingham Trent University | Nottingham, UK

Modules: *Big Data and Infrastructure, Computer Programming, Data Analysis and Visualisation, Deriving Business Value from Data Analysis, Artificial Intelligence, Machine Learning. Dissertation: Android app for automatic location detection and live notification.*

BEng Electronics and Telecommunication Engineering *Aug 2016 – Nov 2020*

Marathwada Mitra Mandal College of Engineering | Pune, India

PROJECTS

Agentic Mesh Orchestration Layer [Python](#) · [Azure Table Storage](#) · [Azure Functions](#) · [LangChain](#) · [A2A Protocol](#) · [Multi-agent Systems](#)

- Built a centralised Agent Registry using Azure Tables to store agent cards defining each agent's capabilities, endpoints, and communication schema, enabling seamless agent discovery and autonomous collaboration within the agentic mesh using the A2A protocol.

Instagram Reel Decoder — AI Travel Planner [Python](#) · [FastAPI](#) · [Google Gemini Pro Vision](#) · [LLMs](#) · [RAG](#) · [Prompt Engineering](#)

- Multimodal AI agent that analyses an Instagram Reel, extracts locations using Gemini Pro Vision (Computer Vision + NLP), and generates a tailored budget travel itinerary deployed as a public FastAPI service.

Cybersecurity Threat Detection Agent (In Progress) [Python](#) · [LangChain](#) · [Azure OpenAI](#) · [Azure Logic Apps](#) · [LLM Evaluation](#)

- Agentic AI system that monitors system activity, flags anomalous patterns via LangChain tool-use pipelines, and automatically generates incident alerts and reports for the security team — with LLM Evaluation for alert quality scoring.

ADDITIONAL

- Right to Work: Graduate Route visa valid until 14 January 2027 — eligible to work in the UK without sponsorship
- Volunteering: Society for Animal Protection, Kolhapur, India (2019–2023)
